

## Command system synchronisation of a garbage treatment factory.

### Schematic solution:

The solution is composed of a time server that generates SNMP frames on an output to synchronize the Command cabinet. Furthermore an IRIG B<sup>(4)</sup> output is multiplied by a SDU, used for the electric protection synchronisation.

(1) Antenna GPSANT

(2) LANTIME M300/GPS/TC-1-1/TCFO-2

(3) SDU : Signal Distribution Unit for IRIG B

(4) IRIG B: Inter-range instrumentation group time codes
